

Reserve, Governance & Community Distribution Framework

A long-term Community Bitcoin Reserve model for Altgeld Gardens, structured for adaptation by other communities and municipalities.

ABR could be the most significant Black economic experiment of the digital age. **Communities deserve to grow with America, not behind it.** ABR lets a neighborhood invest side by side with the country — and own a piece of the scarcest asset ever created.

RESERVE AT A GLANCE

STRUCTURE	RESERVE GOAL	INITIAL HOLD	STANDARD CUSTODY	EXPANDED OPTION	MAX ANNUAL RELEASE
ABR Wealth Fund DAO LLC + ABR Foundation	21 Bitcoin	5 Years	2-of-3 Multisig	3-of-5 Multisig	0.21 BTC after hold

01 Purpose

ABR is designed to create a lasting Bitcoin asset for Altgeld Gardens while establishing a model that can later be adapted by other communities and municipalities.

Communities should have an opportunity to build long-term ownership rather than always starting from zero.

02 Structure and Roles

ABR Wealth Fund DAO LLC is the Reserve and governance entity. It holds and protects Reserve Bitcoin, manages multisignature custody, maintains proof-of-reserves, coordinates governance, approves releases, and protects the 21 BTC objective.

ABR Foundation is the community, education, and public-benefit arm. Its work may include Bitcoin education, financial literacy, youth programming, digital literacy, community workshops, community events, community engagement, and future community-development initiatives.

The Foundation helps connect the Reserve to real community needs but **does not independently control Reserve Bitcoin.**

03 The Governance Body

“Governance body” means the governing members of ABR Wealth Fund DAO LLC, acting under the Reserve Policy. It is the only body that can approve a release of Reserve Bitcoin.

It is distinct from the three keyholders, who execute approved transactions, and from the ABR Foundation board, which sets program priorities but cannot authorize movement of Reserve Bitcoin. A person may serve in more than one role only where the governing documents expressly permit it.

04 Pathway to 21 Bitcoin

ABR can build toward 21 BTC over time through lawful pathways including Bitcoin contributions, private-sector partnerships, corporate sponsorships, philanthropy, individual donors, community fundraising, business-generated revenue, public-private partnerships, government participation where legally authorized, institutional contributions, mining partnerships, grants where permitted, and other approved strategies.

EXHIBIT 1 — RESERVE LIFECYCLE

ACQUIRE → SECURE → VERIFY → HOLD → CAREFULLY
RELEASE → REINVEST

21 BTC is a target, not a current balance. Actual holdings at any point in time are published on the proof-of-reserve display described in Section 10.

05 The Five-Year Hold

Reserve Bitcoin is held for an initial **five years** before community releases begin. Bitcoin's issuance schedule includes a halving roughly every four years; a five-year hold gives the Reserve time to remain invested across at least one full halving interval and reduces pressure to react to short-term volatility.

COMMENCEMENT

The five-year hold runs from the date the Reserve Policy is formally adopted by the governance body and applies to the Reserve as a whole. Bitcoin contributed after that date does not restart or extend the clock.

PERMITTED USE DURING THE HOLD

Reserve Bitcoin is not intended for ordinary spending, payroll, personal expenses, loans, collateral, leverage, or speculative trading.

Build the asset first. Give it time to mature. Then create a disciplined pathway for it to help the community without draining the Reserve.

06 Annual Release Ceiling

After the five-year hold, ABR may release **up to 0.21 BTC per year** for approved community programs and future infrastructure. The amount is a maximum, not a requirement; governance may release less or 0 BTC in a given year, and unused capacity does not accumulate into future years.

If ABR reaches 21 BTC, 0.21 BTC equals **1% of the original 21 BTC target.**

07 Custody and Multisignature Governance

Reserve Bitcoin is held in **2-of-3 multisignature** custody. Two of three keys are required to move Bitcoin, but **key possession alone does not authorize spending**. Governance approval must come first.

EXHIBIT 2 — KEYHOLDER ROLES

1 ABR Keyholder	Protects the Reserve, mission, governance, and institutional continuity.
2 Community Keyholder	Represents resident priorities and protects one Reserve security key. Selected through an open community process and serving a defined, renewable term.
3 Public Accountability Keyholder	A government official, designated government or public-institution representative, or approved public-accountability representative who adds transparency, security, and accountability.

Governance approval + multisignature execution = valid Reserve release.

The Public Accountability role should attach to a defined seat rather than to one politician, so responsibility transfers when leadership changes. A **3-of-5 multisig** option may be used where a community, municipality, institution, or partner wants additional expertise or more distributed governance.

08 Key Succession and Continuity

A keyholder seat may become vacant through resignation, removal, incapacity, death, or departure from the underlying office. The governance body fills a vacant seat within a defined replacement window and, on doing so, migrates the Reserve to a newly generated multisignature quorum so that no retired key remains capable of signing.

Key material is backed up and geographically separated; recovery instructions are held under seal. Keyholders confirm control of their key at least annually, and each confirmation is noted in public reporting.

Because only two of three signatures are required, a single unavailable or non-cooperative keyholder cannot freeze an approved release — and no single keyholder can ever move Bitcoin alone.

09 Community Governance and Annual Roundtable

Throughout the year, the Community Representative/Keyholder and ABR Foundation gather needs, ideas, and priorities from residents. Once per year, ABR holds an **Annual Community Reserve Roundtable** in the neighborhood, a library, City Hall, a municipal or government building, or another trusted public location.

The governance body reviews the options, protects the Reserve Policy, addresses conflicts, and approves or rejects any proposed release. Where a release is approved over the Community Keyholder's stated objection, that objection is recorded in the public report.

EXHIBIT 3 — RELEASE APPROVAL SEQUENCE

**COMMUNITY NEED → ROUNDTABLE → GOVERNANCE
APPROVAL → MULTISIG EXECUTION → PUBLIC REPORTING**

10 Transparency and Proof of Reserve

ABR will maintain proof-of-reserves and publicly report holdings, acquisitions, approved releases, use of funds, remaining Bitcoin, and community results, alongside a continuous public display of Bitcoin price and Reserve position.

EXHIBIT 4 — PUBLIC DISPLAY, REPORTED CONTINUOUSLY

LIVE Bitcoin price tracker	RESERVE total BTC held
VALUE current Reserve value	GROWTH over time
ACTIVITY acquisitions & milestones	ACCOUNTABILITY releases & balance

The purpose is transparency, education, ownership, and hope: young people and adults can see their community's long-term wealth in front of them, and understand that something is being built today that could still be there for them tomorrow.

11 Summary of Safeguards

RISK ADDRESSED	STRUCTURAL SAFEGUARD
Control by one person	2-of-3 multisignature custody; no unilateral movement
Spending without authority	Governance approval required before execution
Short-term reaction to volatility	Five-year initial hold
Depletion of principal	0.21 BTC annual ceiling; no accumulation of unused capacity
Loss or departure of a keyholder	Succession protocol and quorum migration
Political turnover	Public Accountability role attached to a seat, not a person
Opacity	Proof-of-reserves and continuous public reporting

12 Risk Considerations

Bitcoin is volatile. The value of the Reserve may decline substantially, including for extended periods, and past performance does not indicate future results. The five-year hold, the 0.21 BTC annual ceiling, and multisignature custody are designed to make that volatility survivable — not to eliminate it.

ABR does not promise returns, distributions, or a fixed dollar value to any resident, partner, or public body.

13 Defined Terms

Reserve Bitcoin

Bitcoin held by ABR Wealth Fund DAO LLC under the Reserve Policy, subject to the hold and release limits described here.

Reserve Policy

The governing policy adopted by the governance body that controls custody, approval, release, and reporting of Reserve Bitcoin.

Release

A transfer of Reserve Bitcoin approved by the governance body after the five-year hold, within the annual ceiling.

Keyholder

A person or seat holding one signing key in the multisignature quorum. Keyholders execute approved transactions; they do not authorize them.

14 Important Information

Draft framework. This document describes a governance and distribution model under development. It is not an offer to sell or a solicitation to buy any security or interest, is not investment, legal, tax, or accounting advice, and creates no rights. The governing documents of ABR Wealth Fund DAO LLC and ABR Foundation control. Review with qualified legal, tax, accounting, and custody professionals before adoption.
